Product Description

Extreme Components Clutch Protection Kit ALTERNATOR ZX10R Color: Black

The engine protection kit is part of our new line of components, produced directly in our factory thanks to the use of the best light alloys available on the market and all the technologies and know-how that we have been applying for years to create the material used in the World Championship by the best Teams such as Red Bull KTM Ajo, Estrella Galicia Monlau Competicion, Leopard Racing, Pons Racing and many others. Made entirely from solid, they differ from our previous version for:

- the use of the finest aluminum alloys, which guarantee a lower weight with the same strength;
- 3D machining with a 0.8 mm pitch which enhances the details;
- the new finish using bright anodizing which gives a particular shine and increases its durability over time.
- integrated sliders with a different shape compared to the previous ones, optimized even more for the protection of the engine casing in the event of a fall

All the fixing points (at least three for protection) are made by creating a counterbore to house the bolts in order to guarantee the best dissipation of the energy caused by any impact with the ground and to allow easy removal of the damaged part.

Protections made for track use only.

Extreme Components Black Adjustable Rearsets Kawasaki ZX 10R

PED-GP EVO ZX1016 LCD ZX10 16B

Product Description

Extreme Components Adjustable Rearsets PED-GP EVO ZX1016 LCD ZX10 16B Color: Black
Gearbox type: Standard Thanks to the use of premium aluminum alloy and centesimal accuracy processes, the new rearsets are lighter (from 8% to 10% depending of the model) then our previous one, but maintaining the same torque resistance. Breaking points are predetermined thanks to the use of a specific software. Thanks to the use of new CNC machines, the new rearsets are totally machined from solid (lines of 0,8 mm) using 3D technology. The new hard anodization system makes the parts glossy and shiny and guarantee a better durability. The brake and shift levers are fully mounted on ball bearings in specific steel bushing to guarantee the best precision and long durability and now are supplied of a slide to have a micrometrical regulation of the front toe pegs and permit to the rider to find the best position on the motorbike. Both the front toe pegs (brake and shift) are now made in rubber to guarantee a better comfort and better grip as well. Technical features: - Lightweight - Machined from solid billet aluminum - Standard shifting - Plug & play - Micrometrical regulation of the toe pegs - Brake / shift toe pegs in rubber to guarantee a great comfort and grip as well - Predetermined breaking points in case of crash (to limit/avoid the risk of frame's damage) - Fully mounted on ball bearings in specific steel bushing - Hard anodized with shiny treatment
