Product Description

Arrow Competition Dark Titanium Full System Exhaust

71245PTN
External Silencer Material : Dark Titanium
Internal Silencer Material : Stainless Steel
Silencer End Cap Material : Carbon
Manifold material : Titanium The Competition line, designed by Arrow R&D based on track experience, was created specifically for bikes tuned for participation in circuit competitions and are similar to the exhausts that are supplied to top SBK and SS teams. Competition exhausts are made with the utmost attention to detail and ensure the best possible delivery of the powerful engines prepared for racing: increased diameters in some points, different profiles for section variations, accurate couplings, special exhaust terminals, research into materials. Completely assembled with a manual TIG welding process, the Competition line exhausts are available in the 'full titanium' version or in the titanium terminal and stainless steel collectors version.
In all cases, the collector kits are equipped with the CO probe attachment, to check and correct the control unit settings as conditions and the rider's needs vary. The silencer design, Arrow style, is very refined and, in addition to ensuring maximum performance, allows to contain the noise within the limits imposed by the race regulations. A version with a carbon rear endcap is also available.
Following the limitations on the noise of track activities, and the consequent checks that are carried out on the circuits, versions with a removable dB-killer are also available. The Competition exhaust is the state of the art in terms of style, technology and performance of Arrow products.

Racing product NOT approved for road use.
