Product Description

Extreme Components Carbon Adjustable Rearsets PED-GP EVO ZX1016C LCD ZX10 16B

Gearbox type: Standard Thanks to the use of premium aluminum alloy and centesimal accuracy processes, the new rearsets are lighter (from 8% to 10% depending of the model) then our previous one, but maintaining the same torque resistance. Breaking points are predetermined thanks to the use of a specific software. Thanks to the use of new CNC machines, the new rearsets are totally machined from solid (lines of 0,8 mm) using 3D technology. The new hard anodization system makes the parts glossy and shiny and guarantee a better durability. The brake and shift levers are fully mounted on ball bearings in specific steel bushing to guarantee the best precision and long durability and now are supplied of a slide to have a micrometrical regulation of the front toe pegs and permit to the rider to find the best position on the motorbike. Both the front toe pegs (brake and shift) are now made in rubber to guarantee a better comfort and better grip as well. Technical features: - Lightweight - Machined from solid billet aluminum - Standard shifting - Plug & play - Micrometrical regulation of the toe pegs - Brake / shift toe pegs in rubber to guarantee a great comfort and grip as well - Predetermined breaking points in case of crash (to limit/avoid the risk of frame's damage) - Fully mounted on ball bearings in specific steel bushing - Hard anodized with shiny treatment
