Product Description

Jetprime E Wire JP EW 050 The E-Wire kit transforms your bike into a real SBK, transforming the standard digital gas control into a traditional cable control, this type of gas control is used by 90% of the WSBK and MotoGP. The cable also transmits the micro gas openings much better and avoids the involuntary opening on the curbs due to the lack of sensitivity of the digital control. It is possible to adjust the free play and by changing the pulleys it is possible to make it more or less responsive.
