Product Description

Jetprime Racing Quick Throttle Unit JP ACC 109 This throttle control, result of long studies and tests with the best WSSP 600 and WSBK teams, is entirely designed from scratch. The extraordinary thing about this product is that, despite being completely digital and directly installed on our potentiometer, it gives riders the feeling of a traditional throttle control with steel wire that they like so much, in fact they are still used in MotoGP due to their sensitivity. The throttle has a rotation angle of 60 degrees. As optional, we also developed an integrated handlebar switch line that can be installed directly on our product, without adding bulk to the handlebar. Both throttle control and its additional push buttons panel are Plug and Play and compatible with all super sport bikes.
